Missouri Foundation for Health is a resource for the region, working with communities and nonprofits to generate and accelerate positive changes in health. As a catalyst for change, the foundation improves the health of Missourians through a combination of partnership, experience, knowledge and funding.

Fostering Healthy Children

cardinalglennon.com

Our Mission

Through our exceptional health care services, we reveal the healing presence of God.

Fostering healthy children

Children placed in the foster care system are among the most vulnerable members of our society. These children generally come from families with the fewest psychosocial and financial resources, and experience higher rates of serious emotional and behavioral problems, chronic physical disabilities, developmental delays and poor school performance. As pediatric healthcare specialists, we agree with the American Academy of Pediatrics that all children should have access to “continuous, comprehensive, coordinated, compassionate and culturally sensitive primary care.”

As a medical provider and resource to state agencies, community coalitions, kinship, foster and biological parents, we seek to improve the health and well-being outcomes of children (birth -12 years of age) in foster care.

Services we can provide

- >> Entry-to-care health exam
- >> Comprehensive health assessment
- >> Standardized developmental screening
- >> In-clinic mental health assessment
- >> Counseling recommendations, referral and treatment
- >> Education and anticipatory guidance to staff of child protection agencies and community partners, as well as families, regarding normal child development and issues specific to children in foster care
- >> Subspecialty referrals
- >> Ongoing primary care throughout placement, extending into reunification
